

# Project Overview

Part 1:

## Overview:

The final project will be a dynamic and interactive website that serves as my professional portfolio resembling the format and functionality of LinkedIn. It would be like a parody version of linkedin debiting my resume. A satirical approach emulating LinkedIn's complexity.

- **Purpose:** Showcase web design skills and creativity in designing a complex and multifunctional website like LinkedIn.
- **Functionalities:** Mimic LinkedIn with post addition and search features

Part 2:

## Front-End Technologies:

- **Bootstrap:** Use LinkedIn design elements for a professional appearance.
- **JavaScript Animation:** Implement interactive, moving message icons for user engagement.

## Back-End Technologies:

- **Database Implementation:** Store post and resume segment data for dynamic website functionality.
- **AJAX:** Dynamically fetch posts and other segments for a smoother user experience.
- **REST API:** Create endpoints for efficient data flow between front-end and back-end.
